## The (1+1) -dimensional Gross-Neveu model at non-zero $\mu, T$ and finite N

Monday, 25 July 2022 17:20 (1h 15m)

We investigate the Gross-Neveu model for a finite number of fermions N. The solution of the Gross-Neveu model is well known in the large-N limit ( $N \to \infty$ ) but unknown for finite N. We approach the finite-N case with a FRG method, more precisely the Wetterich equation. By using the local potential approximation the resulting flow equation for the scale dependent effective potential can be transformed into a non-linear diffusion equation. This equation is solved numerically by applying a finite volume method. No discrete chiral symmetry breaking is observed for any finite number of fermions, arbitrary chemical potentials as long as the temperature is non-zero.
